

Secure File Sharing

Tresorit makes secure file sharing easy and affordable for your business with anyone inside and outside your company

Keep control of your shared files

Share files and folders securely & easily. Use Tresorit's secure file sharing features to collaborate and to send files and folders, protected by passwords, permissions and end-to-end encryption.

- **Replace risky email attachments:** Send files & folders with secure, protected links instead of email attachments.
- **Share with control:** Keep control of shared links by setting up download limits, expiration dates, and a password for extra protection
- **Tresorit for Outlook:** Replace email attachments with secure, protected links automatically using the Tresorit Outlook Add-in

"We work together with human rights defenders in conflict zones related to transitional justice. Tresorit allows us to securely share and store sensitive information in a way that protects the people we work with and the information itself."

- Elinor Stevenson, Senior Counsel, Public International Law & Policy Group

Protect files with end-to-end encryption

When you upload your files to the Tresorit cloud, end-to-end encryption keeps your file content private when sending or downloading them on the go.

"Attorneys don't need to struggle with mobile VPN anymore. Tresorit lets them work on a tablet or phone when they're with clients."

- Gregory Gulliver, Partner at Apogee Law Group

Set up shared folders with permission control

Stay in sync with your team and collaborate on files. Apps for 8 different platforms ensure compatibility when working with clients all over the world.

"Documents we place into Tresorit appear immediately on the client's laptop. This way we can look at information together."

- Guy Applebee, Partner at Alpha Independent Mortgages

Replace unsecure email attachments

Send documents, share and revoke access easily. No need to download files or share passwords when you're on a business trip.

"I went on vacation and my staff urgently needed access to a file. All I had to do was installing the iPhone app and send them the link."

- Christian Zeyer, Co-Managing Director at Swisscleantech
